EDUCATION

University of Brasília - Undergraduate Program in Biological Sciences Emphasis on Biophysics, Statistical Thermodynamics, and Simulator Development. Cumulative GPA: 4,04	2019
UNINTER - Bachelor's Degree in Technology in Systems Analysis and Development Emphasis on Backend, Web Development and Project Management. In progress	2026

SKILLS

- Fluent English (Certificate EF: C2)
- Backend stack:
 - Python: Flask, Django
 - Java: Maven, Gradle;
 - Golang: Echo.
- PostgreSQL, mySQL
- AWS Infrastructure:
 - ECS, EC2, RDS, S3
- Backlog Management;
- Project Management.
- Frontend Stack:
 - Javascript, Typescript;
 - React, Node & Yarn.
- Agile Methodologies:
 - Scrum, Kanban, XP.
- Generative AI & Agents:
 - Claude (Code, Cowork);
 - OpenClaw;
 - Deep Seek.
- IT Support;

PROFESSIONAL EXPERIENCE

Tabia Health (Healthcare Tech). 2024 - current

Software Developer

Development: Responsible for delivering software solutions to clients through integrations, scripts, and patches using the Java 17 and 23 stack (in the Spring framework) in backend and TypeScript in frontend. Setup of endpoints, creating specifications, and writing JPA queries for PostgreSQL relational databases.

Teamwork: Assistance with integrations, customer customizations, customer environment configurations, and acting as a liaison between product, operations, and development teams.

Data science: Analysis and provision of data for clients and sales team with the aim of customer success or management insights. Use of tools and frameworks in Python and JavaScript for delivering visualizations and integrating new graphical or tabular analyses into products.

Use and implementation of generative AI: I have built agents and routines based on Anthropic Claude and OpenClaw with the goal of accelerating development and operations delivery through the automation of manual tasks and the accelerated delivery of features.

Levee (North American HR tech). 2022 - 2024

Product Manager Jr.

Report to the Chief of Staff and subsequently to the CEO.

Leadership of Development and implementation of HR SaaS products aimed at enterprise companies. Using Artificial Intelligence, the developed solution focused on optimizing the recruitment process and predicting turnover, driving strategic results.

Backlog Management and Prioritization: Organization and prioritization of the development backlog in agile teams, ensuring alignment with business goals and critical deadlines. Use of agile (Scrum, Kanban) and traditional methodologies to maximize efficiency and continuous delivery of value.

Strategic Project Management: Defining project scope, focusing on risk analysis, market research, and product validation. Experience in product discovery, demonstrating Minimum Viable Product (MVP) and Minimum Marketable Product (MMP) to ensure market fit and efficient deliverables.

Leadership in Crisis Resolution: Development and execution of effective crisis resolution strategies, focusing on operational continuity and rapid correction of disruptions related to essential functionalities or continuous

product deliveries.

User Experience (UX) Design and Validation: Designing optimized user experiences based on data and validating proof-of-concept (PoC) projects for user interfaces, ensuring a fluid and engaging experience.

Customer Solutions Engineer – SaaS Platform

Technical Problem Solving: Responsible for identifying, diagnosing, and resolving technical issues faced by end customers on the SaaS platform, ensuring an optimized user experience and minimizing operational disruptions.

Bridge between Internal Teams: Strategic role as a communicator between development, customer success, and product teams, facilitating the exchange of critical information and the agile resolution of customer-reported demands and pain points.

Bug Investigation and Reporting: Responsible for investigating, documenting, and reporting unintentional bugs and technical issues, as well as guiding development teams towards quick and effective solutions, ensuring continuous improvement of the platform.

Customer Education and Training: Development and delivery of manuals and training materials to provide the best support to Customer Success and Sales, enabling them to use the platform efficiently and maximizing the value of the solutions offered by the company.

AIIESEC in Brasilia (International Exchange NGO), 2021-2024

President of the Local Committee

Leadership and office management: Acted as the ultimate legal, managerial, and representative party for a non-profit organization in the third sector.

Management and strategy: Set up the scope of strategies and direct goals and actions related to all areas, addressing financial resources, human resources, marketing, customer acquisition operations, business relationships, institutional partnerships, government relations, and international relations.

Organizational culture: To define and implement organizational values and actions linked to those values using cultural elements and continuous implementation.

Monitoring results: Ultimately responsible for the entity's financial and numerical results, with the responsibility of defining the direction and implementing actions that result in the effectiveness of those results.

Main deliverables:

- External debts paid off;
- Sales increased by 91% compared to the previous year;
- Increase in the number of volunteers by 50%;
- Highest volunteer retention rate (88%) in the first half of the year among Brazilian offices.

Vice-President of the Local Committee and Operations Director

Leadership development: Responsible for managing and developing team members and managers in sales, customer experience, and customer success, with the goal of developing the leadership skills of these volunteers and generating successful service contracts with customers.

Monitoring results: Responsible for the entity's financial and numerical results, with the responsibility of defining the direction and implementation of actions that result in the effectiveness of the results.

Laboratory of Computational Theoretical Biophysics, ICB UNB, 2016 to 2019

Internship: Research Designer

Research project: Using a genetic algorithm written in Java, statistical thermodynamics, and information theory, we created systems that predict the structure of cytoplasmic globular proteins *in silico*.
